DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, 46 and 47, drawn to compounds and pharmaceutical compositions of the set of compounds described by formulas (I)-(V), classified in class 564 and 514, subclass: various.
- II. Claims 23-45, drawn to methods of use of the above compounds, classified in class 564 and 514, subclass: various.
- III. Claim 48, drawn to an antibody, classified in class 530, subclass: various.
- IV. Claims 49-50, drawn to a method of preparing phenylboronic acid, classified in class 568, subclass: various.
- V. Claims 51-58, drawn to methods of preparing a thyronamine derivative, classified in class 564, subclass: various.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and IV are unrelated – each to the other, or to the other three Groups above. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, an antibody, per force, has a different mode of operation, a different function and a different effect compared to the mode of operation, the function, etc. of a method for preparing a

phenylboronic acid. Analysis comparing inventions III and IV to the claims of the other Groups is similar.

Inventions V and II are related as process of making and process of using the product. The use as claimed cannot be practiced with a materially different product. Since the product is not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claims 1-47 and 51-58 are generic to a plurality of disclosed patentably distinct species comprising the set of compounds described by formulas (I)-(V). Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. The examiner respectfully requests that any such elected species be explicitly defined in terms of the variables of the appropriate formula (I)-(V).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
